

## About the Market

Increase in injuries and deaths due to fire in the commercial and residential building is driving the global smoke detector market. Additionally, increasing urban population demands private and government sectors across the globe to tighten legislation on fire safety.

Worldwide more than 200,000 people are dying annually because of fire—this contributes to more deaths than war related events.

It is time to make a change and protect our homes with the best system in the world.

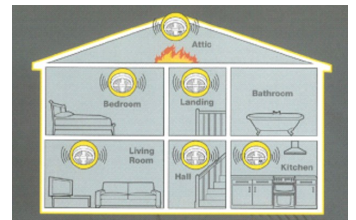

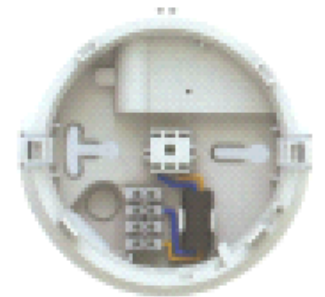

## CITC News

CITC has signed the exclusive distributorship for BRK Smoke detectors.

The RF Interlink Base is an installers dream—no cables, no mess. The unit has been designed to transmit a Radio Frequency (RF) Signal when sensing smoke or fire. Connected devices will then simultaneously trigger the alarm and a system wide alert is being initiated.

These unique features make the BRK smoke detectors the most powerful solution in the industry.
