

About CiTC

CiTC has signed an exclusive agreement to distribute TYRESAFE® in the Middle East, Africa and India. TYRESAFE® is simply inserted via your existing tire air valve into your wheel forming an instant seal protecting your tires against punctures up to 6 mm for cars and 10 mm for trucks. The seal is so effective that it will last for the entire lifespan of your tires, so you will never have to repair your tires again - TYRESAFE® has already done this for you!

TYRESAFE® prevents accidents, increases productivity, safety and further will save you money and time.

About your tires

Flat tires account for 10% of vehicle breakdowns. This by itself is a frightening statistic of lost time and inconvenience. However, even more frightening are the numbers from the US Department of Transportation. In the US over 70,000 accidents occur because of tire blowouts leading to 500 deaths annually.

The problem of an accident due to a tire blowout is even more grim when looking at the aftermath. Over 45% of the vehicles rolled over and caused severe safety hazards to their passenger, compared to less than 20% of the accidents with out a tire blowout.

It is time to rethink some of the day to day safety aspects in our lives.

TYRESAFE® saves time and money but most importantly it protects the lives of your employees and loved ones.

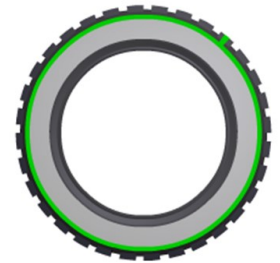

Safeguards your tires

Easy installation

Forms instant seal
